COOGEE NSW 2034

Phone: (02)9874519
Fax:

MR Arthur PREDIA (09/02/1958)
996 Toast ROAD COONAMBLE
NSW 2829
EPID:

Service Date: 14/01/2025
Patient Id: HI010000
Episode No: S00000007

Examination:

CT cervical spine (noncontrast)

Clinical History:

Occipital headaches.

Comparison:

Nil.

Findings:

There is normal alignment of the cervical spine. No fracture or prevertebral soft tissue thickening.

Moderate-to-severe facet joint arthropathy on the right at T1/2.

Severe uncovertebral joint arthropathy on the left at C4/C5 and moderate uncovertebral joint arthropathy on the left at C7/T1. No significant degenerate changes at the craniocervical junction.

There are moderate intervertebral disc degenerate changes at C5-C6 and C6/C7. These are associated with disc osteophyte complexes which contribute to mild central canal narrowing at C5-C6 and mild to moderate central canal narrowing at C6/7.

On the right, there is moderate foraminal narrowing at C5-C6 and severe foraminal narrowing at C6/C7.

On the left, there is moderate foraminal narrowing at C4/5 and C5-C6. Severe foraminal narrowing at C6/C7.

This is an official medical report. If you are not the intended recipient contact our radiology practice immediately.
